

Guidance for Composite Propellers

■ Summary of Major Amendments

Related Rules/Guidance	Effective date
Guidance for Composite Propellers	1 April 2019 (Date of which the application for certification of product is submitted)

■ Major Amendments

○ Reason for Amendments

The new guidance has been established to reflect the recent material change attempts to improve the performance and economic feasibility of marine propellers

○ Amendments

This guidance is applied to composite propellers products used in ships made of composites materials instead of copper alloy or stainless steels

The requirements for the approval of manufacturing process for composite propeller blades and the approval of product for composite propellers are provided

○ Impact Analysis

None
